

Benefit from PCM elastomer manufacturer know-how!

WHAT WILL CHEMICAL COMPATIBILITY TESTING DO FOR YOU?

Temperature and pressure test

- You can take advantage of PCM's 70 years worth of expertise in pump and elastomer manufacturing
- Possible temperature range between 0 and 200°C with pressure of up to 50 bar
- A possible test on bi-phase or decanted products

OUR EXTENSIVE SERVICE INCLUDES:

- We will fully analyse the chemical compatibility of your products with our elastomers
- Testing products under the exact conditions that you will use them
- Extensive testing over a 2-3 week period
- We can test the qualities of five separate elastomers
- We will measure and assess the hardness trend
- Provision of a dimensional check (volume)
- Provision of a comprehensive visual check
- Drafting of a highly detailed report confirming the recommendations of the manufacturer
- Recycling or return of tested product, as per your instructions

Equipment adapted to your needs
