

PCM will ensure you optimal pump operation!

HOW WILL YOU BENEFIT FROM VISCOSITY TESTING?

- At PCM, we offer you a test which can be conducted on products with up to 500,000 cstoke or a shearing rate up to 1,300 Sec-1
- You will receive a precise estimate of pipeline losses in your installation
- We can help you to optimise the choice of pumping equipment and pipework

OUR EXTENSIVE SERVICE INCLUDES:

- Characterisation of the rheological behaviour of the product at a temperature range between -5°C and +90°C
- A pre-test will be carried out to investigate the operating range of the viscometer, depending on the product
- The test measures the constraints on shearing depending on the speed curve
- Calculation of product viscosity is achieved by using the speed curve gradient
- Determining the rheological behaviour of the product
- We will prepare a detailed report with constructor recommendations
- Recycling or return of tested product, as per your instructions

WHAT YOU NEED TO DO:
